COLOUR

The brand palette

Warm khaki-cream grounds, a deep teal for structure and premium sections, and one bright lime accent. The dots on each swatch show which text colour stays legible on it — **light** (white) or **dark** (ink).

SURFACES

LOGO

Using the mark

Two lockups cover every background. Give the mark room to breathe and never recolour it.

Colour logo — on paper, cream, and light collateral.

White logo — on teal, photography, and dark collateral.

ICON / APP MARK

Icon-only mark — favicons, app icons, avatars and tight square spaces on light grounds.

Icon-only mark on dark or photographic grounds.

Do

- ✓ Keep clear space around the mark equal to the height of the "a".
- ✓ Use the white logo on dark or busy photographic backgrounds.
- ✓ Keep the wordmark legible — roughly 120px minimum width in print.

Don't

- ✗ Recolour the logo outside the brand palette.
- ✗ Stretch, rotate, or add shadows and effects.
- ✗ Place the colour logo on dark or low-contrast grounds.

COMPONENTS & SHAPE

Buttons, tags & cards

Fully-rounded pill buttons, capability tags, and big-radius cards are core to the look. Lime is reserved for the one primary action per view.

BUTTONS

Primary (lime) · Dark (teal) · Ghost · White. Sizes: 44px / 56px tall.

EYEBROW DEVICE

FOR LAND OWNERS

Own Land? Let's turn it into your next big opportunity.

A lime marker line + uppercase label sits above every section heading.

How it moves & sits

Motion is quick and purposeful — most transitions land in 150–300ms and everything respects reduced-motion. Layout is editorial: a centred column with generous gutters.

Container	max-width 1080–1280px · gutters 24/32/48px	Centred editorial column; content never spans edge-to-edge.
Section padding	80px mobile · 112px desktop	Vertical rhythm between sections.
Ease — Out Soft	cubic-bezier(0.22, 1, 0.36, 1)	General transitions and image scale.
Ease — Out Expo	cubic-bezier(0.16, 1, 0.3, 1)	Buttons and snappy reveals.
Ease — Spring	cubic-bezier(0.34, 1.56, 0.64, 1)	Playful, slightly overshooting motion.
Durations	200ms micro · 300ms standard · 700ms image · 1200ms hero	Keep UI motion 150–300ms.
Lime CTA glow	0 16px 36px -14px rgba(231,243,82,.7)	Hover lift on the primary button.
Reduced motion	prefers-reduced-motion: reduce	All non-essential animation is switched off.

Everything lives in code

These tokens are pulled straight from the production site, so the design system and the live website never drift apart.

design-system/agamana-design-system.json – machine-readable tokens

src/app/globals.css – colour, radius & easing variables

src/app/layout.tsx – font definitions
